Re: Transportation Engineer

Dear Hiring Team,

I would like to apply for the Transportation Engineer position. I am an Assistant Planner in Transportation Planning at the City of Toronto, with a master's degree in transportation engineering from the University of Alberta, and I am interested in consulting work for municipal and private-sector clients across Ontario.

At the City I review development applications and the transportation studies filed with them, analyze Transportation Tomorrow Survey data, and write the briefing notes that carry findings and options to senior staff. That is the client side of the transportation impact studies your team prepares, and it has given me a close look at what a reviewer wants to see in one. At Mott MacDonald I simulated Ontario Line construction staging and road closures in Synchro, and at Metrolinx I worked in OpenTrack on rail service questions.

At Metrolinx I set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours, and built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions.

I should be straightforward about the gaps. I am not registered with Professional Engineers Ontario as an EIT or a P.Eng. I have not worked in a consulting firm on client deliverables, and I have not done parking demand studies, traffic signal warrant analyses or collision analyses in my own work, nor have I used Arcady. I do not have a Class G licence. I am applying because the development transportation review, traffic modelling and data work is where my experience sits, and I would like to build on it in consulting.

Thank you for considering my application.

Sincerely,

Abdullah Al Zahid
