Hiring Manager
Mobility Data Analysis, City of Edmonton

Re: Safe Mobility Analyst (ID 56338)

Dear Hiring Manager,

I would like to apply for the Safe Mobility Analyst position. I am an Assistant Planner in Transportation Planning at the City of Toronto. I did my master's degree in transportation engineering at the University of Alberta, so Edmonton is a city I know.

The role is about turning transportation data into evidence people can act on, and that is the part of my work I do most. At the City I built the Transportation Data Dashboard, which brings several years of the Transportation Tomorrow Survey into one validated source, and I analyze travel and network data for trends, gaps and emerging issues. I maintain the division's road and right-of-way datasets in GIS and Python, including a right-of-way width dataset for all city roads, and I write the briefing notes and reports that carry findings to senior staff. My master's research used GIS and simulation to study how road networks perform under stress, and I took a graduate course in GIS as part of the program. I also set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours, and built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions.

I should be straightforward about the gaps. I have not worked with collision, near-miss or conflict data, or on Vision Zero programs, and I have not done predictive risk modelling or evaluated the effect of safety countermeasures. I have not used SPSS, R, Tableau or Google BigQuery, and my university degrees are in engineering rather than statistics. I would count the road safety side as what I need to learn, and the posting's four years of analytical experience is a little more than I have in a municipal setting.

Thank you for considering my application.

Sincerely,

Abdullah Al Zahid
