Hiring Manager
Urban Systems, Kamloops Office

Re: GIS Analyst, Kamloops

Dear Hiring Manager,

I would like to apply for the GIS Analyst position in the Kamloops office. I am an Assistant Planner in Transportation Planning at the City of Toronto, where much of my work is building and looking after the spatial data the division relies on.

I build and maintain the road and right-of-way datasets Transportation Planning depends on, using ArcGIS Pro, QGIS, Python and SQL, including a right-of-way width dataset covering all city roads, built with QGIS, MapBox and JavaScript. I also built the Transportation Data Dashboard, which brought several years of travel survey data into one validated source. The posting asks for someone who sees where integration and automation can help, and i also set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours, and built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions. My master's thesis used GIS and simulation to assess community capacity for wildfire evacuation, and I took a graduate course in GIS as part of that program. I also use AutoCAD and Civil 3D.

I should be straightforward about the gaps. I do not hold a GIS degree, diploma or certificate; my training is a graduate course in GIS and my work. I have not worked with ArcGIS Online in a consulting setting, digitized as-built drawings, maintained infrastructure asset inventories for a utility, or worked with reality capture, geomatics or remote sensing. I have not worked in British Columbia, and my GIS work has been in transportation rather than civil infrastructure.

Thank you for considering my application.

Sincerely,

Abdullah Al Zahid
