Re: GIS Manager (multidisciplinary consulting firm)

Dear Hiring Manager,

I would like to apply for the GIS Manager position you are recruiting for on behalf of a multidisciplinary consulting firm in Toronto. I am a transportation engineer and an Assistant Planner in Transportation Planning at the City of Toronto, where much of my work is building and maintaining the spatial data the section relies on.

I build and maintain the road and right-of-way datasets Transportation Planning depends on, using GIS and Python, including a right-of-way width dataset covering all city roads, built with QGIS, MapBox and JavaScript. I also built the Transportation Data Dashboard, which combined several years of survey data into one validated source the division reports from. Keeping data consistent enough that other people can rely on it is most of that work. I also work in AutoCAD and Civil 3D.

My master's research included spatial analysis of large transportation datasets in GIS for wildfire evacuation planning. At Metrolinx I set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours, and built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions.

I should be straightforward about the gaps. I have not led or supervised GIS staff, and my GIS work has been in transportation rather than environmental, geotechnical or hydrogeological projects. I have not set company-wide GIS standards or managed field-data systems.

Thank you for considering my application.

Sincerely,

Abdullah Al Zahid
