Re: Aviation Planner

Dear Hiring Manager,

I would like to apply for the Aviation Planner position. I come to it from transportation planning rather than aviation, so I want to be clear about both what I would bring and where I fall short.

The posting starts with capacity, demand forecasting and operational improvements, and those are the questions my work has been about. At the City of Toronto I analyze travel and network data, including several years of the Transportation Tomorrow Survey, to work out where capacity is short and what that means for future investment. At Metrolinx I ran OpenTrack simulations of GO rail services to test how infrastructure constraints and construction restrictions changed run times and reliability, and at Mott MacDonald I simulated Ontario Line construction staging, which is close to the construction operation planning the posting mentions.

At Metrolinx I set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours, and built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions. I work in AutoCAD and Civil 3D, and I write the technical reports and presentations that carry findings to decision-makers.

I should be straightforward about the gaps. I have no aviation planning experience, and the posting asks for seven to ten years. I have not prepared airport master plans or terminal and airside layouts, carried out aeronautical impact assessments, or applied CARs, TP312, TP1247 or ICAO standards, and I have not used CAST or AviPlan.

Thank you for considering my application.

Sincerely,

Abdullah Al Zahid
