Talent Acquisition

Engineering and Safety — System Safety and Engineering Management Office
Metrolinx, 20 Bay Street

Re: Manager, System Risk Modeling & Intelligence (Job ID 117339)

Dear Hiring Manager,

I would like to be considered for the Manager, System Risk Modeling and Intelligence position with the System Safety and Engineering Management Office. I spent 2023 in the Metrolinx Service Design office running OpenTrack simulations of GO rail service, and one line in this posting describes that work from the other side: giving service design and operational planning the data that goes into their service planning simulation tools.

That is the part of the role I understand best. At Metrolinx I tested what proposed operating and infrastructure changes would do to run times, schedule reliability and recovery, and much of the value depended on the quality of the operations data behind the simulation. I built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions, and set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours. Finding where schedules were most exposed to variance was, in effect, reliability analysis at the level of the timetable.

The posting also asks for a single source of data for senior leaders and timely deep dives on emerging issues. At the City of Toronto I built the Transportation Data Dashboard, which combined several years of data from separate operational sources into one validated source the division reports from; most of that work was reconciling sources that did not agree. I also write the briefing notes and presentations that carry findings to managers across divisions.

I should be straightforward about the gaps, because this is a manager's role. I have not led a team or managed staff, which the posting asks for directly. I have not worked with RAMS or EN 50126, with commercial mechanisms such as liquidated damages, or with formal Lean and Plan-Do-Check-Act programmes, and I have not been responsible for expense allocation or cost management. I do not hold a P.Eng. The analytical core of the role is familiar to me; the leadership and the RAMS regime would be new. If the office has an advisor-level position, I would welcome being considered for that as well.

Thank you for taking the time to consider my application.

Sincerely,

Abdullah Al Zahid
