Position Description

JOB DESCRIPTION

Would you like to have a career with a collaborative, diverse, and dynamic mining company? We have an exciting opportunity for you!

Barrick is looking for a Geospatial Data & GIS Solutions Lead. The successful candidate is responsible for supporting and advancing geospatial data, GIS, remote sensing, data integration and technical automation capabilities across Exploration. The role works at the intersection of geoscience, GIS, remote sensing, data management and development, helping ensure geological, geochemical, geophysical, remote-sensing and other Exploration datasets are appropriately captured, organized, integrated, quality-controlled, accessible and reusable.

The role combines strong geospatial expertise with hands-on technical development, including the use of Python and geospatial technologies to improve, automate and standardize workflows. Working closely with the Regional Geosciences Data & Analytics Manager and multidisciplinary Exploration teams, the role will help strengthen data standards and knowledge continuity, integrate GIS with other Exploration systems, and develop practical, reusable solutions. The successful candidate is not expected to be an expert in every technology; the role requires a strong geospatial and technical foundation, hands-on Python capability, collaborative problem solving and a strong orientation toward continuous learning. This position is located in Toronto, Canada. The yearly salary for this position is between CAD 119,000 – 133,000.

At Barrick, our vision is to be the world’s most valued gold mining business by finding, developing, and operating the best assets with the best people. We are committed to a safe work environment sending every person home safe and healthy every day and leaving a sustainable legacy on our host communities.

Responsibilities

- Work with geological, geochemical, geophysical, remote-sensing and other Exploration datasets across GIS, databases, project environments and web-based platforms.

- Support and improve workflows using ArcGIS Pro, ArcGIS Enterprise, ArcGIS Online, Web GIS, Field Maps and Survey123.

- Compile, integrate, QA/QC and standardize geospatial and geoscience datasets; improve how spatial data is structured, documented, discovered, shared and reused.

- Help establish practical geospatial data standards, metadata, naming conventions and reusable project structures aligned with corporate standards and protocols.

- Work with raster, satellite and remote-sensing datasets; process, analyze, integrate and visualize them alongside geological, geochemical and geophysical information.

- Use Python to automate repetitive geospatial and data-processing workflows and develop scripts, tools and lightweight solutions for GIS, compilation, QA/QC, analysis and integration.

- Use ArcPy and other geospatial Python libraries where appropriate, and work with SQL, APIs and spatial databases to connect GIS with other Exploration data systems.

- Identify manual or repetitive workflows and determine opportunities to simplify, standardize or automate them before introducing new technology.

- Participate in Git/version-control and modern development practices and collaborate with data engineering and analytics/development specialists to move useful prototypes into reliable operational workflows.

- Use approved AI-assisted development tools responsibly where they can improve development, learning, documentation or workflow efficiency.

- Work directly with geologists, geochemists, geophysicists, GIS/geoscience data specialists, data engineers and analytics/development resources to understand requirements and co-create practical solutions.

- Document datasets, systems and workflows; support knowledge transfer so important technical knowledge is reusable and understood by the broader team.

- Support field and office-based Exploration workflows and travel to projects or regional offices as required.

- Promote continuous improvement in GIS, geospatial data management, integration and automation practices.

- Comply with Barrick Health & Safety, Code of Conduct, Human Rights, Environmental and Community Relations requirements and applicable company policies.

Qualifications

- Academic degree in Geography, GIS/Geomatics, Geospatial Science, Remote Sensing, Computer Science, Geoscience, Geological Engineering, Surveying or a related technical discipline required

- Minimum 5 years of relevant professional experience in GIS, geospatial technology, geoscience spatial data, or a related environment required

- Strong hands-on experience with the Esri ecosystem, particularly ArcGIS Pro and ArcGIS Enterprise/Web GIS, including enterprise GIS data and workflows required

- Experience working with both vector and raster geospatial datasets, including remote sensing, satellite imagery or raster processing required

- Hands-on Python programming experience, preferably applied to geospatial data processing, analysis, automation or development preferred

- Strong understanding of coordinate systems, projections, spatial data quality, QA/QC and sound data-management practices preferred

- Experience compiling, managing, standardizing or integrating geospatial datasets preferred

- Strong analytical and practical problem-solving skills, including the ability to understand existing workflows and user needs before selecting a technical solution preferred

- Ability to communicate and collaborate effectively with technical and non-technical users across multidisciplinary Exploration teams preferred

- Strong orientation toward continuous learning and improvement; ability to work independently while collaborating effectively with the broader team preferred

- Valuable but not all required: ArcPy, SQL/SQL Server, spatial databases, APIs, FME/ETL, Git, Azure DevOps, ArcGIS Enterprise/Online, Web GIS, Field Maps, Survey123, cloud geospatial technologies, data pipelines, Leapfrog, Geosoft, Power BI, geoscience/mining data, machine learning or AI-assisted development preferred

- Experience in mineral exploration, mining, geology, geophysics, geochemistry, remote sensing or natural resources is highly valuable; strong candidates from other geospatial or scientific backgrounds preferred

- Eligible to live and work in the applicable country required

- Availability for occasional travel to Exploration projects and regional offices required

What We Can Offer You

- A comprehensive compensation package including a competitive medical, dental, and vision plan with national provider networks, a 401k retirement plan with employer contribution, paid time off, company-sponsored medical clinics, company match share purchase program, and much more!

- Work in a dynamic, collaborative, progressive, and high-performing team.

- Opportunities to grow and learn with the industry colleagues are endless.

- Access to a variety of career opportunities across the organization.

- Barrick is committed to creating a diverse environment and is proud to be an equal opportunity employer

Thank you for your application, however, only those selected for an interview will be contacted.
