Hiring Manager
Mobility and Intelligent Transportation Systems
Artelia Canada, Mississauga

Re: Team Lead, Mobility and ITS

Dear Hiring Manager,

I would like to be considered for the Team Lead position in Mobility and Intelligent Transportation Systems. I am an Assistant Planner in Transportation Planning at the City of Toronto, with a master's degree in transportation engineering. My work is on the planning and analysis side of transportation, and I am writing knowing that this is a senior role and that I am earlier in my career than it asks.

At the City I review development applications and the transportation studies filed with them against City standards, analyze travel and network data, including the Transportation Tomorrow Survey, and run assigned projects from scoping to recommendations. At Mott MacDonald I ran traffic simulations in Synchro to estimate how Ontario Line construction staging would affect surrounding streets, and at Metrolinx I simulated GO rail operations in OpenTrack. My graduate research modelled evacuation traffic on road networks.

At Metrolinx I set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours, and built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions.

I should be straightforward about the gaps. The posting asks for ten years in transportation planning or traffic engineering and I have fewer than four. I have not led a team of engineers and technicians, managed project budgets, prepared proposals or worked on client business development. I have not done intelligent transportation systems or highway design work, and I am not a registered professional engineer. I am applying because the analysis and study work is close to what I do now, and I would understand if the role needs someone further along.

Thank you for considering my application.

Sincerely,

Abdullah Al Zahid
