Re: Senior Aviation Planner (Reference REF3026P)

Dear Hiring Manager,

I would like to apply for the Senior Aviation Planner position with the Aviation team. I come to it from transportation planning rather than aviation, and I want to be clear about both what I would bring and where I fall short.

Several of the listed responsibilities are close to my current work. The first is reviewing and interpreting transportation data to support capacity planning and operational decisions: at the City of Toronto I analyze travel and network data to establish where capacity falls short and what that means for future investment. Land use concepts and zoning frameworks are familiar from reviewing development applications against the Official Plan. Construction phasing and operations planning connect to my Mott MacDonald work simulating Ontario Line construction staging, and to assessing what slow orders would do to GO rail service at Metrolinx.

The posting also mentions familiarity with simulation and modelling software. I have worked with VISSIM, Synchro, MATSim and OpenTrack. At Metrolinx I set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours, and built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions. I write technical memoranda, reports and presentations, and I have built a dashboard the division reports from, though I have not used Power BI.

The gaps are significant. The posting strongly prefers twelve or more years of airport planning experience, and I have none: I have not prepared airport master plans, airfield or terminal configurations, aeronautical impact evaluations or air service studies, and I have not used CAST or AviPlan, though I have worked in AutoCAD and Civil 3D. If the team has an intermediate planning role, I would welcome being considered for it.

Thank you for considering my application.

Sincerely,

Abdullah Al Zahid
