**Talent Acquisition**
Airport Operations
Greater Toronto Airports Authority, Toronto, ON

**Re: Senior Capacity Planning Analyst**

Dear Hiring Manager,

I would like to apply for the Senior Capacity Planning Analyst position with the Capacity Allocation team. I am a transportation engineer with a master's degree, and much of my work has been about capacity: how much a network can carry, where it falls short, and what a change would do to it.

At Metrolinx I ran OpenTrack simulations of GO rail services to test how infrastructure constraints and speed restrictions changed run times, reliability and recovery, and presented that evidence to schedulers, operations staff and engineers. I also set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours, and built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions. My master's research modelled how road networks perform during emergency evacuations, using macroscopic (LWR) and agent-based (MATSim) models.

At the City of Toronto I analyze travel and network data, including several years of the Transportation Tomorrow Survey, to work out where capacity is short and what that means for future investment. I built the Transportation Data Dashboard, which brought several years of survey data into one validated source the division reports from, and I write up results for readers without a modelling background.

I should be straightforward about the gaps. I have not worked at an airport or with airport data, so gating, towing, slot and schedule analysis would be new to me, as would airport simulation tools. I have not used Power BI, Visual Basic, Access, Oracle or Microsoft Fabric. The posting prefers eight years of professional experience; I have about four and a half, plus my graduate research.

Thank you for considering my application.

Sincerely,

Abdullah Al Zahid
