Re: Senior Business Intelligence Performance Analyst (Job ID 117642)

Dear Hiring Manager,

I would like to apply for the Senior Business Intelligence Performance Analyst position with the Strategy & Centres of Excellence team. I worked at Metrolinx in 2023 as a Transportation Planner in Service Design, and since January 2024 I have been an Assistant Planner in Transportation Planning at the City of Toronto.

The posting asks for automated dashboards and reporting tools, less manual reporting, and stronger data validation. That is what the Transportation Data Dashboard did at the City: it replaced a report rebuilt by hand each quarter with one validated source, combining several years of survey data, and the division now reports from it. I also build and maintain the road and right-of-way datasets the division depends on, using GIS and Python.

At Metrolinx I ran OpenTrack simulations of GO rail services and presented the evidence to schedulers, operations staff and engineers. I also set up a command line workflow that pre-simulated slow orders in batches, cutting turnaround on scenario requests from days to hours, and built the Crew Variance Tool, a Python application that read large JSON operations files and summarised speed profiles and run-time variance across subdivisions.

I should be straightforward about the gaps. Of the tools the posting names, I work in SQL, Python and Excel, but I have not used Power BI, Tableau, Qlik Sense or R, and I have not built reporting in an enterprise BI platform or worked with financial data. My analysis has been of travel and operations data rather than regression and time-series forecasting.

Thank you for considering my application.

Sincerely,

Abdullah Al Zahid
